Congenital heart diseases (CHDs) affect approximately 1 in 100 newborns and remain a leading cause of infant mortality. Advances in fetal medicine and cardiac interventions have revolutionized the management of CHDs, offering unprecedented opportunities for early diagnosis and intervention.

Fetal Interventions

Fetal interventions encompass a range of procedures performed during pregnancy to address specific CHDs. These interventions aim to improve fetal outcomes, such as reducing heart failure and optimizing fetal growth.

- **Balloon Valvuloplasty:** Widening narrowed heart valves
- **Stent Placement:** Implanting small devices to keep vessels open
- **Laser Ablation:** Removing obstructive lesions in the heart

Hybrid Procedures

Hybrid procedures combine fetal interventions with surgical interventions after birth. This approach allows for staged treatment, optimizing outcomes and reducing the risks associated with complex heart surgeries in premature infants.

- **Fetal Balloon Valvuloplasty with Postnatal Surgical Repair:** Improving heart function before and after birth
- **Fetal Stenting with Postnatal Hybrid Repair:** Maintaining vessel patency and reducing the need for repeat surgeries

Benefits of Fetal and Hybrid Procedures

- Improved fetal outcomes and survival rates
- Reduced need for complex surgeries after birth
- Optimized cardiac function and growth throughout pregnancy

- Enhanced long-term outcomes and quality of life

Expert Insights and Case Studies

Our book features contributions from renowned surgeons, cardiologists, and fetal interventionists who share their expertise and insights. Case studies illustrate the practical applications and outcomes of fetal and hybrid procedures, providing valuable guidance for practitioners.

Why Choose Our Book?

- Comprehensive coverage of all aspects of fetal and hybrid procedures
- Step-by-step guidance from experienced practitioners
- Evidence-based recommendations and best practices
- High-quality illustrations and surgical videos
- Essential resource for cardiac surgeons, cardiologists, fetal medicine specialists, and other healthcare professionals
